---

This is important information from Zsophia who is leading the community in water quality issues handled on site to minimize runoff and maximize return of water to the ground for filtration, reuse and retention similar to nature's cycles.

Master Gardeners are cooperating with Rain Garden training for homeowners, raising awareness of LID =Low Impact Development ideas and supporting the importance of retention, filtration, reuse of water on site before it moves on in transpiration or ground water .

I've shared this within the circle of architects and yard designers.

Thank you for the focus on water quality using plants and soil to improve our total environment.

Personally, as an educator, gardener, mycology and tree fruit enthusiast using integrated pest management-IPM, I'm enthusiastic about the positive and wide spread impact of these ideas are capable of promoting.

Good morning -

**As a stakeholder for clean water, Ecology needs to hear from you about the importance and impact of low impact development and green infrastructure.**

**We urge you to submit a comment letter to Ecology as soon as possible urging them to strengthen key elements of the permit.** The analysis you can read below this message is intended to provide information and context for you as you draft your letter. Please send your personalized letter to the following email address: [SWPermitComments@ecy.wa.gov](mailto:SWPermitComments@ecy.wa.gov) and please send me a copy as well.

**The deadline for submitting your comment letter is February 3<sup>rd</sup>.**

**Thank you for your support,**
