

Hello!

On **January 20, 2006, 2:00 p.m. at the City Council Chambers, Spokane City Hall**, 808 W. Spokane Falls Blvd., the Center for Justice is hosting a presentation in Spokane by Jonathan Todd on ecologic engineering and design. Jonathan Todd is the Senior Partner of John Todd Research and Design, Inc., a leading firm in the development of ecological technologies for food production, waste purification and conversion, environmental restoration and systems integration for architecture and eco-industrial parks. The award-winning firm provides cost-effective, sustainable alternatives to wastewater and storm water treatment and bio-solids conversion, among other things. Projects include an advanced ecologically engineered municipal wastewater treatment system in Vermont, treatment of a pond contaminated with toxic leachate, the treatment of high strength waste from a poultry processing plant, ecologically engineered buildings that treat, recycle and reuse wastewater and restoration of a canal in China polluted by raw sewage. For more information see <http://www.jtecodesign.com/index.html>; and www.oceanarks.org.

We believe these technologies may provide environmentally sound solutions to some of the region's problems. So please save a spot on your calendar and plan to join us for this presentation. Please feel free to forward to those who might be interested.
